

## Correction

# Responses to sound of the basilar membrane of the mammalian cochlea

**Mario A. Ruggero**

Current Opinion in Neurobiology 1992, 2:449–456

In the above paper reference [39•] was cited as in press. In fact, this paper has only been submitted for publication. Also the annotation that accompanied [39•] was based on an initial finding of a mechanical ( $f_2-f_1$ ) distortion product in the response of the basilar membrane (AL Nuttall and DF Dolan: Quadratic Intermodulation Distortion [ $f_2-f_1$ ] in Inner Hair Cell Receptor Potentials and Basilar Membrane Motion. *Association for Research in Otolaryngology, Midwinter Meeting Abstracts* 1992, 118), which has not been confirmed in [39•]. MA Ruggero apologizes for any confusion caused by this incorrect citation.
